

# How to grow better citrus

## Do you want...

- ✓ Improved fruit yields
- ✓ Stronger growth
- ✓ Less pests and disease

**Achieve all of this with our 'secret' recipe!**

**Apply the following every 2-3 wks as a foliar spray**

|              |   |       |                         |
|--------------|---|-------|-------------------------|
| eco-aminogro | @ | 5ml   | } Per litre<br>of water |
| eco-seaweed  | @ | ½-1gm |                         |
| eco-oil      | @ | 2 ml  |                         |

This spray produces strong healthy growth, increased cell division for larger fruit and reduced incidence of pests and diseases. Can also be watered into the soil but without the eco-oil.

This spray is recommended on top of a slow release fertiliser regime.

## Organic Pest & Disease Control

If a problem does occur use the following products:

BFA ALLOWED INPUT 222AI  
**CERTIFIED  
PRODUCT FOR  
ORGANIC GARDENS**

|  |                                |
|--|--------------------------------|
| Sap suckers eg aphids, scale, mites        | eco-oil or eco-neem*           |
| Citrus Leafminer                           | eco-oil or eco-CLM Trap        |
| Chewing insects eg caterpillars, leafminer | eco-neem*                      |
| Fruit fly                                  | eco-naturalure & eco-lure trap |
| Fungal diseases                            | eco-fungicide                  |

\*eco-neem is currently registered for use on ornamental citrus only in Australia. Overseas it is registered for use on edible plants with no withholding period.

**All products are Certified Organic (BFA) and are safe for beneficial insects like bees and ladybeetles.**
